

The Cost Of Fixing A Code Vulnerability:

Fun Fact: The cleanup cost for fixing a bug in a homegrown Web application ranges anywhere from \$400 to \$4,000 to repair, depending on the vulnerability and the way it's fixed.

Developer Time Required To Remediate A Vulnerability:

Nucleus™ simple integration

The Nucleus application code scanning platform supports integration with GitHub, GitLab, BitBucket, and any other Git-enabled externally facing code repository. Furthermore, Nucleus now supports Azure Devops TFS integrations. Empower your developers to address risks in the early stages of the development and drive action to expedite the remediation process before vulnerabilities surface in your production environment.
